Cisco Talos Japan Ransomware Trends and The Gentlemen Activity

Daily Update 2026-09-27

1. Executive Summary

Cisco Talos reported that ransomware incidents in Japan increased in the first half of 2026, with The Gentlemen among the most active groups. Defenders with Japanese operations or suppliers should prioritize identity controls, remote access review, backup recoverability, and ransomware-ready endpoint coverage.

This report converts public reporting into practical defender actions for the 2026-09-27 UTC daily intelligence cycle. It cites available public sources, separates source-backed facts from Lost Boys Cyber analysis, and includes detection and hunting content suitable for validation and tuning.

2. Intelligence Requirements

Question	Current Answer	Confidence
What changed in the reporting window?	Public reporting or same-week advisories elevated this issue for defender review.	Medium
Who should prioritize review?	Japanese operations, global suppliers, ransomware defense teams.	Medium
What can defenders do today?	Confirm exposure, apply mitigations, preserve logs, deploy behavioral detections, and run the hunts below.	High

3. Source Review & Confidence

Source	Contribution	Confidence
Cisco Talos	Primary ransomware trend reporting	Medium/High
Microsoft Gentlemen ransomware analysis	Technical family context	Medium/High
CISA StopRansomware	Government ransomware mitigation guidance	Medium/High

Freshness note: selected for the 2026-09-27 UTC daily cycle. Where aviation/aerospace-specific public reporting is sparse, sector context sources are used only to frame exposure and not to fabricate same-day victimology.

4. Threat Activity Overview

Cisco Talos reported that ransomware incidents in Japan increased in the first half of 2026, with The Gentlemen among the most active groups. Defenders with Japanese operations or suppliers should prioritize identity controls, remote access review, backup recoverability, and ransomware-ready endpoint coverage. The issue is prioritized for the 2026-09-27 UTC daily run because it has immediate defender relevance across identity, endpoint, cloud/SaaS, supplier, or sector operational environments. Where reporting does not publish atomic IOCs, Lost Boys Cyber uses behavior-based detections and hypothesis-driven hunts rather than inventing indicators.

5. Affected Sectors and Exposure

Sector / Environment	Exposure Consideration
Japanese operations	Review identity, endpoint, SaaS, third-party, and logging exposure connected to the activity.

global suppliers	Review identity, endpoint, SaaS, third-party, and logging exposure connected to the activity.
ransomware defense teams	Review identity, endpoint, SaaS, third-party, and logging exposure connected to the activity.
Managed service and supplier access	Third-party accounts and shared platforms can make one incident propagate quickly.
Cloud and SaaS-heavy environments	Identity logs, OAuth grants, remote support, and collaboration events are often the earliest telemetry.

6. Tactics, Techniques, and Procedures

Tactic / Phase	Observed or Plausible Technique	Evidence / Use
Reconnaissance / Resource Development	Scanning, lure development, public infrastructure, or supplier discovery	Public reporting describes scalable activity or exposed technology risk.
Initial Access	Exploitation of public-facing applications, phishing, identity abuse, or supplier pathway	Validate against local exposure before escalating.
Execution	Script/tool execution, upload abuse, installer execution, or remote-support tooling	Correlate endpoint telemetry with user, parent process, and network context.
Command and Control	Remote management infrastructure, web callbacks, or rare external destinations	Review DNS/proxy/firewall data for anomalous destinations.
Impact	Data theft, policy/control-plane compromise, ransomware enablement, or operational disruption	Business impact depends on local exposure and resilience.

7. Infrastructure and Indicators

Indicator / Infrastructure	Type	Operational Use
Source-published atomic IOCs	Not consistently available in public reporting for this automation cycle	Ingest only from cited primary sources when present.
Ransomware, Trends, Gentlemen, Activity, Update	Behavioral hunt terms	Seed queries and triage; not standalone indicators of compromise.
New upload, script, installer, remote-support, or rare outbound activity	Behavior	Triage with user, parent process, authentication, and network context.

8. Detection Engineering

8.1. Detection Summary

Signal	Telemetry Source	Analytic Goal
Suspicious process or web activity containing report terms	EDR, web, proxy, application logs	Surface exploitation, lure, script, or remote-tool behavior for triage.
Administrative change after external access	App audit logs, identity, firewall, EDR	Detect compromise of management or

		business applications.
Rare outbound destinations from privileged systems	DNS, proxy, firewall, NetFlow	Identify staging, callbacks, or exfiltration attempts.

8.2. Sigma / Detection Content

<pre> title: Cisco Talos Japan Ransomware Trends and The Gentlemen Activity Daily Update 2026-09-27 Behavioral Triage status: experimental logsource: product: windows category: process_creation detection: selection_terms: CommandLine contains: - "Ransomware" - "Trends" - "Gentlemen" - "Activity" - "Update" selection_tools: Image endswith: - "\powershell.exe" - "\cmd.exe" - "\wscript.exe" - "\msiexec.exe" - "\curl.exe" condition: selection_terms and selection_tools falsepositives: - Approved administration, vulnerability scanning, deployment tooling, or sanctioned testing level: high DeviceNetworkEvents where Timestamp > ago(14d) where RemoteUrl has_any ('Ransomware', 'Trends', 'Gentlemen', 'Activity', 'Update') or InitiatingProcessCommandLine has_any ('Ransomware', 'Trends', 'Gentlemen', 'Activity', 'Update') summarize FirstSeen=min(Timestamp), LastSeen=max(Timestamp), Hosts=dcount(DeviceName), Events=count() by RemoteUrl, RemoteIP, InitiatingProcessFileName order by Events desc </pre>

9. Threat Hunting

9.1. Hunt Hypothesis

If this activity affects the environment, telemetry will show rare external interactions followed by script, installer, upload, remote-support, administrative, or privileged process activity.

<pre> DeviceProcessEvents where Timestamp > ago(14d) where ProcessCommandLine has_any ('Ransomware', 'Trends', 'Gentlemen', 'Activity', 'Update', 'AnyDesk', 'QuickAssist', 'msiexec', 'powershell', 'curl', 'wget') project Timestamp, DeviceName, AccountName, FileName, ProcessCommandLine, InitiatingProcessFileName, InitiatingProcessCommandLine order by Timestamp desc </pre>
<pre> index=endpoint earliest=-14d search (process="*powershell*" OR process="*msiexec*" OR process="*curl*" OR process="*AnyDesk*" OR process="*QuickAssist*") stats count min(_time) as first max(_time) as last by host user process parent_process </pre>

10. Risk Assessment

Dimension	Assessment
Likelihood	Medium to High where affected products, identities, suppliers, or

	sector exposure exists.
Impact	Medium to High; possible data theft, ransomware staging, control-plane compromise, or operational disruption.
Detection Confidence	Medium; behavior detections require local tuning and corroboration.

11. Recommended Actions

Priority	Owner	Action
Critical	Asset / Vulnerability Management	Confirm exposure to the affected technology, campaign behavior, or sector pathway and apply vendor mitigations.
High	SOC / Detection Engineering	Deploy or tune the detection content in a monitored workspace and create a short-term hunt ticket.
High	Identity / Platform Admins	Review MFA, privileged accounts, OAuth/app grants, administrative actions, and third-party remote access.
Medium	GRC / Vendor Management	Request supplier assurance where shared platforms, aviation systems, engineering systems, or managed services are involved.
