Report Type	Threat Report

TLP:CLEAR | Lost Boys Cyber | Lantronix EDS5000 Aviation OT Exposure and KEV Prioritization Report - Threat Report

Published: 2026-06-30 | TLP:CLEAR | Version: 1.0 | Author: Lost Boys Cyber

AI Generation: This report was generated with AI assistance and is provided for informational purposes only. All findings, IOCs, detection rules, hunting queries, attribution assessments, and recommendations must be independently reviewed and validated by a qualified security professional before operational use.

Table of Contents

1. Executive Summary
2. Coverage Window Note
3. Intelligence Requirements
4. Source Review & Confidence
5. Threat Actor / Campaign Overview
6. Tactics, Techniques, and Procedures
7. Infrastructure and Indicators
8. Victimology and Targeting
9. Detection Engineering
 - 9.1. Detection Logic Summary
 - 9.2. Sigma / Detection Rule
 - 9.3. Hunt Query
10. Threat Hunting
 - 10.1. Hunt Hypotheses
 - 10.2. Network Hunt Query
11. Risk Assessment
12. Aviation and Aerospace Sector Impact
13. Recommended Actions
14. References

Lantronix EDS5000 Aviation OT Exposure and KEV Prioritization Report

1. Executive Summary

CVE-2025-67038 in Lantronix EDS5000 was added to CISA KEV on June 23, 2026. Although the product is not aviation-only, serial-to-Ethernet and edge connectivity devices are relevant to airport, MRO, and industrial aviation environments where legacy OT and facilities systems bridge into IP networks.

2. Coverage Window Note

The aviation/aerospace daily section prioritized the last 24-72 hours first. Because fewer than five corroborated, sector-specific public items were available in that window, this report intentionally expands to a recent/standing sector-relevant source set and labels trend-level or strategic exposure claims accordingly.

3. Intelligence Requirements

Requirement	Answer in This Report
What happened?	CISA KEV lists a Lantronix EDS5000 code injection vulnerability as exploited.
Who is affected?	Organizations using Lantronix EDS5000 or similar edge/serial connectivity in aviation OT, airport facilities, MRO, and industrial environments.
What should defenders do?	Inventory edge connectivity devices, patch or isolate, and hunt for management-plane access.
Confidence	High for KEV status; medium for aviation-specific prevalence.

4. Source Review & Confidence

Source	Contribution	Confidence
CISA Known Exploited Vulnerabilities Catalog	Confirms CVE-2025-67038 KEV status	High
CISA ICS recommended practices	OT mitigation context	High
IATA Aviation Cyber Security	Aviation sector security context	Medium

5. Threat Actor / Campaign Overview

Aviation operators often inherit mixed OT, facilities, baggage, fueling, and MRO environments. Edge connectivity devices deserve the same emergency governance as routers and VPN appliances when KEV-listed.

6. Tactics, Techniques, and Procedures

Tactic	Technique / Behavior	Defensive Interpretation
Initial Access	Exploitation of edge network/OT device	Remove internet exposure and restrict management.
Persistence	Device configuration changes	Capture configs and compare to baseline.
Defense Evasion	Living on unmanaged network equipment	Centralize logs and firmware inventory.

--	--	--

7. Infrastructure and Indicators

Observable Type	Signal	Notes
Behavior	Source did not publish stable atomic IOCs	Hunt on process, network, identity, and SaaS behaviors.

Hard IOCs are limited where primary sources did not publish stable indicators. Treat behavior, infrastructure class, and telemetry pivots as the primary hunting path until local intelligence enrichment identifies environment-specific indicators.

8. Victimology and Targeting

Any operator with exposed or poorly segmented Lantronix EDS5000 management surfaces; aviation relevance is strongest in OT/facilities networks.

9. Detection Engineering

9.1. Detection Logic Summary

Signal	Telemetry Source	Analytic Goal
Suspicious script or LOLBin execution	Endpoint process telemetry	Surface initial execution and staging activity
New external connection after lure/app execution	Network telemetry	Identify callback or payload retrieval
Unusual account, mailbox, or SaaS activity	Identity/SaaS audit logs	Detect credential abuse and persistence

9.2. Sigma / Detection Rule

```

title: Suspicious Script and Remote Tool Activity - lantronix-eds5000-aviation-ot-exposure-k
status: experimental
logsource:
  product: windows
  category: process_creation
detection:
  selection_tools:
    Image|endswith:
      - '\powershell.exe'
      - '\wscript.exe'
      - '\cscript.exe'
      - '\mshta.exe'
      - '\rundll32.exe'
  selection_suspicious:
    CommandLine|contains:
      - 'http'
      - 'download'
      - 'EncodedCommand'
      - 'Invoke-Expression'
  condition: selection_tools and selection_suspicious
level: high

```

9.3. Hunt Query

```

DeviceProcessEvents
| where Timestamp > ago(14d)
| where FileName in~ ("powershell.exe", "wscript.exe", "cscript.exe", "mshta.exe", "rundll32.exe",
"node.exe", "osascript")
| where ProcessCommandLine has_any ("http", "download", "EncodedCommand", "Invoke-Expression", "curl",

```

```
"wget")
| project Timestamp, DeviceName, AccountName, FileName, ProcessCommandLine, InitiatingProcessFileName
```

10. Threat Hunting

10.1. Hunt Hypotheses

Hypothesis	Query Focus
Initial access used lure-driven script, package, or web exploitation behavior.	Correlate suspicious process launches with browser, archive, package-manager, or web-server parents.
Follow-on access used identity or remote-management tooling.	Review new OAuth grants, administrative changes, RMM agents, and rare remote endpoints.

10.2. Network Hunt Query

```
DeviceNetworkEvents
| where Timestamp > ago(14d)
| where InitiatingProcessFileName has_any ("powershell.exe", "node.exe", "python.exe", "osascript",
"curl", "wget")
| summarize Connections=count(), RemoteUrls=make_set(RemoteUrl, 20) by DeviceName,
InitiatingProcessFileName, RemoteIP
| order by Connections desc
```

11. Risk Assessment

Risk Area	Assessment	Rationale
Initial Access	Elevated	Recent reporting indicates active or plausible attacker interest.
Credential Exposure	Medium-High	Many campaigns convert endpoint access into identity abuse.
Operational Disruption	Medium	Impact depends on privilege, sector, and dependency concentration.

12. Aviation and Aerospace Sector Impact

Sector Segment	Operational Relevance	Exposure Path	Defender Action
Airport OT/facilities	Edge devices may connect legacy systems to IP networks	Exposed management interfaces	Segment, patch, restrict admin access
MRO/manufacturing	Serial/IP gateways support equipment telemetry	Flat industrial networks	Inventory and configuration baselines
Aviation supply chain	Small edge devices may be missed in audits	Third-party managed equipment	Include in vendor risk reviews

Aviation/aerospace operators should assess not only direct enterprise compromise but also third-party concentration: airport common-use platforms, MRO vendors, satellite connectivity providers, identity providers, reservation systems, engineering PLM, and managed service providers can all become operational chokepoints.

13. Recommended Actions

Priority	Owner	Action
High	SOC	Deploy hunts in this report and tune to local

		telemetry.
High	IT/security engineering	Patch exposed systems, verify EDR coverage, and restrict script interpreters where possible.
Medium	Identity team	Review new privileged accounts, OAuth grants, and risky sign-ins for the lookback period.
Medium	Threat intel	Track source updates for IOCs, exploit details, and sector-specific victimology.
