TLP:CLEAR | Lost Boys Cyber | Check Point Q2 2026 Ransomware Shift Daily Threat Review Update - Threat Report

Published: 2026-08-14 | TLP:CLEAR | Version: 1.0 | Author: Lost Boys Cyber

AI Generation: This report was generated with AI assistance and is provided for informational purposes only. All findings, IOCs, detection rules, hunting queries, attribution assessments, and recommendations must be independently reviewed and validated by a qualified security professional before operational use.

Table of Contents

1. Executive Summary
2. Intelligence Requirements
3. Source Review & Confidence
4. Threat Activity Overview
5. Affected Sectors and Exposure
6. Tactics, Techniques, and Procedures
7. Infrastructure and Indicators
8. Detection Engineering
 - 8.1. Detection Summary
 - 8.2. Sigma / Detection Content
 - 8.3. Hunt Query
9. Threat Hunting
 - 9.1. Hunt Hypothesis
 - 9.2. Hunt Query
10. Risk Assessment
11. Recommended Actions
12. References

Check Point Q2 2026 Ransomware Shift Daily Threat Review Update

1. Executive Summary

Check Point Research reported that the Q2 2026 ransomware landscape is broadening as new actors and affiliate pressure reshape victim risk. Defenders should use the report to reassess extortion exposure, backup readiness, and identity-driven intrusion paths.

This daily review prioritizes practical defender action over attribution certainty. Source depth was expanded to the last seven days where needed to preserve high-confidence, multi-source reporting rather than fabricate same-day claims.

2. Intelligence Requirements

Question	Current Answer	Confidence
What changed for defenders today?	Ransomware operations remain active while actor mix and targeting patterns shift.	Medium
Who is most exposed?	Organizations with flat networks, weak MFA, exposed remote access, and immature backup validation.	Medium
What immediate action should analysts take?	Run ransomware readiness checks and hunt for staging behavior.	High

3. Source Review & Confidence

Source	Contribution	Confidence
Check Point Research: The State of Ransomware Q2 2026	Primary ransomware trend reporting	High
Bitdefender Threat Debrief August 2026	Data-leak-site and ransomware context	Medium
CISA StopRansomware guidance	Defender mitigation baseline	High

4. Threat Activity Overview

The activity is trend-level rather than one intrusion. It points to continuing extortion pressure, possible new affiliate ecosystems, and the need to watch precursor behaviors including credential theft, RMM misuse, data staging, and backup tampering.

5. Affected Sectors and Exposure

Sector / Environment	Exposure	Analyst Priority
Enterprise identity and endpoint estates	Credential abuse, script execution, and malware/ransomware staging.	Review high-risk sign-ins, new persistence, and anomalous script activity.
Cloud and SaaS administration	Token theft, OAuth abuse, risky automation, and data exposure.	Audit consent grants, service principals, and admin actions.
Managed service / supply chain	Shared access paths amplify impact.	Validate supplier controls and inbound trust relationships.

6. Tactics, Techniques, and Procedures

Tactic / Phase	Observed Technique	Evidence
Initial Access	Phishing, exposed service exploitation, or supplier compromise	Source reporting describes active threat activity or sector-relevant risk.
Execution	Command/script execution and automation abuse	Daily detection focus includes process and cloud-control-plane telemetry.
Persistence / Defense Evasion	Token/OAuth misuse, service changes, tooling overlap	Hunt for abnormal long-lived access and administrative changes.
Impact	Data theft, ransomware/extortion, or operational disruption	Reported campaigns and sector risk concentrate on business disruption.

7. Infrastructure and Indicators

Indicator / Infrastructure	Type	Operational Use
Public sources did not provide stable atomic IOCs for all environments	Limitation	Use behavior-led detections and enrich with local/vetted vendor IOCs.
ransomware	Keyword / analytic pivot	Use in triage notes, EDR search, and CTI tagging; not an IOC by itself.

8. Detection Engineering

8.1. Detection Summary

Signal	Telemetry Source	Analytic Goal
Suspicious script or command execution after lure/access event	EDR process telemetry	Identify payload staging, reconnaissance, or automation abuse.
Unusual outbound destination or direct-to-IP access	Network/EDR DNS and connection telemetry	Surface malware C2, staging, or infrastructure bypassing DNS controls.
New OAuth grant, token use, or admin consent anomaly	Cloud identity logs	Detect identity-centric intrusion and persistence.

8.2. Sigma / Detection Content

```

title: Daily Threat Activity Signal - ransomware
id: daily-20260814-daily-threat-activity-signal-ransomware
status: experimental
description: Analyst-facing daily-review detection seed for Daily Threat Activity Signal - ransomware.

author: Lost Boys Cyber
date: 2026/08/14
logsource:
  category: process_creation
detection:
  selection_keywords:
    Keyword1: "ransomware"
    Keyword2: "ransomware"
    Keyword3: "token"
  condition: selection_keywords
falsepositives:

```

- Administrative scripts or vulnerability-scanner probes using the same product strings.
level: medium

8.3. Hunt Query

```
let lookback = 14d;
let terms = dynamic(["ransomware", "ransomware", "oauth", "token"]);
DeviceNetworkEvents
| where Timestamp > ago(lookback)
| where RemoteUrl has_any (terms) or InitiatingProcessCommandLine has_any (terms)
| summarize FirstSeen=min(Timestamp), LastSeen=max(Timestamp), Hosts=dcount(DeviceName),
Samples=make_set(InitiatingProcessCommandLine, 5) by RemoteUrl, RemoteIP, InitiatingProcessFileName
| order by LastSeen desc
```

9. Threat Hunting

9.1. Hunt Hypothesis

Relevant activity will present as behavior chains rather than a single static IOC: lure or exploit trigger, script/process execution, identity or token changes, outbound staging, and data-access anomalies.

9.2. Hunt Query

```
let lookback = 14d;
let pivots = dynamic(["ransomware", "oauth", "token", "ransomware", "extortion"]);
DeviceProcessEvents
| where Timestamp > ago(lookback)
| where ProcessCommandLine has_any (pivots) or InitiatingProcessCommandLine has_any (pivots)
| summarize FirstSeen=min(Timestamp), LastSeen=max(Timestamp), Hosts=dcount(DeviceName),
Examples=make_set(ProcessCommandLine, 5) by FileName, InitiatingProcessFileName
| order by LastSeen desc
```

10. Risk Assessment

Risk	Likelihood	Impact	Notes
Identity-led intrusion	Medium	High	Current reporting continues to show credential/token misuse as a durable access path.
Ransomware/extortion	Medium	High	Impact depends on segmentation, backup readiness, and supplier blast radius.
Operational disruption	Medium	High	Highest for aviation/aerospace, healthcare, manufacturing, and managed-service dependencies.

11. Recommended Actions

Priority	Action
P0	Review whether the organization uses affected products/services or matches the reported exposure pattern.
P1	Run the included hunts, tune with local IOCs, and validate alerts with identity/network context.
P1	Confirm MFA, conditional access, vendor access, backups, and incident communications for affected business owners.
P2	Add source URLs and report metadata to CTI tracking/OpenCTI

	for recurring review.
