Trellix SecondSight September 2026 Threat Hunting Daily Review

Threat Intelligence Report

Classification	TLP:CLEAR
Published	2026-09-16
Version	1.0
Author	Lost Boys Cyber
Report Type	Threat Intelligence Report

TLP:CLEAR | Lost Boys Cyber | Trellix SecondSight September 2026 Threat Hunting Daily Review - Threat Intelligence Report

Published: 2026-09-16 | TLP:CLEAR | Version: 1.0 | Author: Lost Boys Cyber

AI Generation: This report was generated with AI assistance and is provided for informational purposes only. All findings, IOCs, detection rules, hunting queries, attribution assessments, and recommendations must be independently reviewed and validated by a qualified security professional before operational use.

Table of Contents

1. Executive Summary
2. Intelligence Requirements
3. Source Review and Confidence
4. Threat / Campaign Overview
5. Tactics, Techniques, and Procedures
6. Infrastructure, Indicators, and Observables
7. Sector Impact
8. Detection Engineering
9. Threat Hunting
10. Risk Assessment
11. Recommended Actions
12. References

Trellix SecondSight September 2026 Threat Hunting Daily Review

1. Executive Summary

BLUF: Trellix SecondSight reporting highlights APT28 cloud-storage C2 through filen.io, Bitter APT abuse of a compromised diplomatic inbox, and JSceal payload delivery patterns. This report is a finished Lost Boys Cyber daily intelligence product for 2026-09-16. Source recency was prioritized for the last 24-72 hours and expanded to 7 days or standing sector references where necessary for corroboration.

Field	Value
Daily Section	Top 5 general threat reports
Severity	Medium-High
Confidence	Medium
Primary Exposure	Enterprise SOC, cloud/proxy monitoring, email security, and government/diplomatic-adjacent organizations.
Analyst Decision	Review controls, hunt telemetry, and update watchlists/playbooks

2. Intelligence Requirements

Requirement	Answer
What changed?	Trellix SecondSight reporting highlights APT28 cloud-storage C2 through filen.io, Bitter APT abuse of a compromised diplomatic inbox, and JSceal payload delivery patterns.
Who should care?	Enterprise SOC, cloud/proxy monitoring, email security, and government/diplomatic-adjacent organizations.
What should analysts do today?	Validate exposure, run hunts, and review third-party/control exceptions

3. Source Review and Confidence

#	Source	URL	Role
1	Trellix SecondSight September 2026 report	https://www.trellix.com/advanced-research-center/threat-reports/secondsight-threat-hunting-report-september-2026/	Primary research
2	MITRE ATT&CK Cloud Services technique	https://attack.mitre.org/techniques/T1102/	Technique reference
3	CISA Cross-Sector Cybersecurity Performance Goals	https://www.cisa.gov/cpg	Control reference
4	Malware Patrol early September cyber threat reports	https://www.malwarepatrol.net/early-september-2026-cyber-threat-	Corroborating threat roundup

		reports/	
--	--	----------	--

Confidence is Medium. This product avoids unverified attribution and treats vendor/news reporting as operational cues pending internal validation.

4. Threat / Campaign Overview

The selected reporting indicates a defender-relevant pressure point: Trellix SecondSight reporting highlights APT28 cloud-storage C2 through filen.io, Bitter APT abuse of a compromised diplomatic inbox, and JSCEal payload delivery patterns. The likely operational pattern is not a single IOC-only event; it is a class of behavior that combines exposure management, identity control, endpoint visibility, and rapid triage.

Signal	Why It Matters	Collection
filen.io cloud C2	Primary analytic pivot for this topic	SIEM/EDR/vulnerability/source logs
compromised diplomatic inbox	Secondary behavior or exposure clue	Identity, proxy, EDR, cloud logs
JSCEal Node.js payload	Triage and watchlist value	Case notes, watchlists, alert enrichment

5. Tactics, Techniques, and Procedures

Tactic	Technique / Behavior	Defensive Note
Initial Access	Phishing, exploit delivery, exposed remote access, or supplier access	Prioritize high-value users/assets and vendor paths
Execution	Scripted execution, payload staging, or malicious automation	Monitor parent/child process chains and command-line anomalies
Credential Access	Token, password, or session theft where relevant	Review impossible travel, risky sign-ins, OAuth app grants
Command and Control	Reused infrastructure, cloud services, or remote-management tooling	Enrich DNS/proxy/EDR network events and block known-bad only after validation

6. Infrastructure, Indicators, and Observables

Observable	Type	Action
filen.io cloud C2	Observable / analytic pivot	Validate in SIEM, EDR, vulnerability, and ticketing systems
compromised diplomatic inbox	Observable / analytic pivot	Validate in SIEM, EDR, vulnerability, and ticketing systems
JSCEal Node.js payload	Observable / analytic pivot	Validate in SIEM, EDR, vulnerability, and ticketing systems

No hard atomic IOCs are asserted unless present in the cited public sources. Treat these entries as observables and hunting pivots.

7. Sector Impact

Segment	Operational Relevance	Likely Exposure Path	Defender Action
Enterprise IT	Credential theft and endpoint compromise can accelerate	Identity, email, browser, cloud,	Validate MFA, EDR coverage,

	lateral movement	endpoint	and privileged access controls
Security operations	Current reporting creates new detection and watchlist priorities	SIEM/EDR/proxy/email logs	Run hunts and add source-specific pivots
Third parties	Supplier or managed-service exposure can bypass direct perimeter controls	Vendor access, SaaS, shared tooling	Review contractual notifications and access paths

8. Detection Engineering

<pre>DeviceProcessEvents where Timestamp > ago(7d) where ProcessCommandLine has_any ("powershell", "rundll32", "mshta", "regsvr32", "curl", "bitsadmin", "rmm", "screenconnect", "anydesk") summarize Events=count(), Hosts=dcount(DeviceName), Samples=make_set(ProcessCommandLine, 10) by FileName, InitiatingProcessFileName order by Events desc</pre>
<pre>SigninLogs where TimeGenerated > ago(7d) where ResultType != 0 or RiskLevelDuringSignIn in ("medium", "high") summarize Failures=count(), Users=dcount(UserPrincipalName), IPs=make_set(IPAddress, 20) by AppDisplayName, ConditionalAccessStatus order by Failures desc</pre>
<pre>title: Daily Threat Review Suspicious Remote Tool Or Script Chain status: experimental logsource: product: windows category: process_creation detection: selection_tools: CommandLine contains: - 'screenconnect' - 'anydesk' - 'teamviewer' - 'powershell -enc' - 'rundll32' condition: selection_tools fields: - UtcTime - Image - ParentImage - CommandLine - User level: medium</pre>

9. Threat Hunting

<pre>DeviceNetworkEvents where Timestamp > ago(14d) where RemoteUrl has_any ("pastebin", "githubusercontent", "workers.dev", "ngrok", "trycloudflare", "duckdns", "filen", "mega") summarize Events=count(), Hosts=dcount(DeviceName), Urls=make_set(RemoteUrl, 25) by InitiatingProcessFileName order by Events desc</pre>
<pre>index=endpoint earliest=-14d (process_name IN ("powershell.exe", "rundll32.exe", "mshta.exe", "regsvr32.exe") OR command_line="*screenconnect*" OR command_line="*anydesk*") stats count dc(host) as hosts values(command_line) as sample_commands by parent_process_name process_name user sort - count</pre>

Hunt intent: identify behavior classes related to this daily item, then pivot through affected business units and source-specific observables.

10. Risk Assessment

Risk	Rating	Rationale
Operational disruption	Medium-High	Dependent services, identity, or endpoints can affect business continuity
Data exposure	Medium	Credential/session compromise and supplier paths can expose sensitive data
Detection gap	Medium	Many signals require cross-domain telemetry correlation

11. Recommended Actions

Priority	Action	Owner
P1	Run the included hunts against the last 7-14 days	SOC / Detection Engineering
P2	Validate control exceptions and internet/vendor exposure	Vulnerability / IT Ops
P3	Add this topic to daily watchlists and case-triage notes	CTI / SOC Lead
