Large-Scale Credential Attacks Against Cloud Identity Daily Watch

1. Executive Summary

Unit 42 updated reporting on large-scale credential attacks describes continued pressure against Microsoft Entra and cloud identity tenants. Defenders should prioritize risky sign-in review, MFA fatigue controls, and privileged account hardening.

This daily report favors defensible, source-backed actions over attribution certainty. Where public reporting describes a trend rather than a single intrusion set, the report maps the most relevant behaviors into detection and hunting hypotheses.

2. Intelligence Requirements

Question	Current Answer	Confidence
Why should defenders review this today?	Recent public reporting, sector exposure, or active exploitation makes the topic operationally relevant for triage.	Medium
Are hard IOCs available?	No unique hard IOCs are asserted in this report unless listed in the source material; hunts emphasize behaviors and telemetry.	High
Which environments are most exposed?	Internet-facing services, identity-heavy SaaS, developer/build systems, and third-party-connected networks.	Medium

3. Source Review & Confidence

Source	Contribution	Confidence
Primary/vendor research	Core activity description and defensive context	High
Reputable security reporting	Corroborating context and operational impact	Medium
Lost Boys Cyber analysis	Sector impact, detection logic, and prioritization	Medium

4. Threat Activity Overview

Credential attacks are a cross-sector enabler rather than a single malware family. The report focuses on password spraying, MFA fatigue, token theft, and anomalous cloud application access that could precede data theft or lateral movement.

5. Affected Sectors and Exposure

Exposure Area	Defensive Concern	Priority
Identity and privileged access	Account takeover, MFA fatigue, token theft, and misuse of valid accounts	High
Internet-facing applications	Exploitation, web-shell staging, or unauthorized API access	High
Developer and package ecosystems	Dependency poisoning, stolen CI/CD secrets, and code-signing abuse	High
Third-party connections	Supplier compromise may become direct	Medium

	access into aviation/aerospace or enterprise networks	
--	---	--

6. Tactics, Techniques, and Procedures

Tactic / Phase	Observed Technique	Evidence
Initial Access	Valid accounts, phishing, exploit public-facing application, or supply-chain compromise	Public reporting and exposure analysis.
Execution	Scripted execution, package lifecycle scripts, or remote service abuse	Defensive behavior model for the topic.
Persistence	Account/session persistence, backdoored dependencies, or service configuration change	Relevant to post-access hunt scope.
Collection/Exfiltration	Credential, source-code, or data theft	Common consequence described across recent threat reporting.

7. Infrastructure and Indicators

Indicator / Infrastructure	Type	Operational Use
No report-unique atomic IOC asserted	Limitation	Use behavior hunts and cited vendor IOCs where available.
MFA fatigue, password spray, Entra, credential, token	Hunt keywords	Seed telemetry searches for process, URL, package, and identity events.

8. Detection Engineering

8.1. Detection Summary

Signal	Telemetry Source	Analytic Goal
New privileged sign-in or anomalous MFA prompt volume	Identity logs	Catch account-takeover or MFA-fatigue paths.
Script/interpreter spawned by browser, package manager, web service, or remote-admin tool	EDR process telemetry	Surface payload staging or post-compromise automation.
Unusual outbound connection or archive creation	Network/file telemetry	Identify data staging and exfiltration preparation.

8.2. Sigma / Detection Content

```

title: Daily Threat Behavior - Large-Scale Credential Attacks Against Cloud Identity Daily Watch
id: lbc-large-scale-credential-attacks-against-cloud-identity-daily-watch-behavior
status: experimental
description: Behavioral detection for daily intelligence topic; tune keywords and parent processes to local environment.
logsource:
  product: windows
  category: process_creation
detection:

```

```

selection_interpreter:
  Image|endswith:
    - '\powershell.exe'
    - '\pwsh.exe'
    - '\cmd.exe'
    - '\wscript.exe'
    - '\cscript.exe'
    - '\python.exe'
    - '\node.exe'
selection_keywords:
  CommandLine|contains:
    - 'MFA fatigue'
    - 'password spray'
    - 'Entra'
    - 'credential'
    - 'token'
condition: selection_interpreter or selection_keywords
fields:
  - Image
  - ParentImage
  - CommandLine
  - User
falsepositives:
  - Developer automation and administrative scripts; tune by user, host role, and approved tooling.
level: medium

```

8.3. Hunt Query

```

// Behavioral hunt for Large-Scale Credential Attacks Against Cloud Identity Daily Watch
let lookback = 14d;
let terms = dynamic(['MFA fatigue', 'password spray', 'Entra', 'credential', 'token']);
DeviceProcessEvents
| where Timestamp > ago(lookback)
| where ProcessCommandLine has_any (terms) or InitiatingProcessCommandLine has_any (terms)
| project Timestamp, DeviceName, AccountName, FileName, ProcessCommandLine, InitiatingProcessFileName,
InitiatingProcessCommandLine
| order by Timestamp desc

```

9. Threat Hunting

9.1. Hunt Hypothesis

Compromise attempts tied to this topic will create unusual identity events, suspicious interpreter execution, package/developer tooling anomalies, or outbound data movement from systems that do not normally perform those actions.

9.2. Hunt Query

```

SigninLogs
| where TimeGenerated > ago(14d)
| where ResultType != 0 or RiskLevelAggregated in ('medium','high') or AuthenticationRequirement =~
'multiFactorAuthentication'
| summarize Attempts=count(), Failed=countif(ResultType != 0), Apps=make_set(AppDisplayName, 10),
IPs=make_set(IPAddress, 25) by UserPrincipalName, bin(TimeGenerated, 1h)
| where Attempts > 10 or Failed > 5
| order by Attempts desc

DeviceNetworkEvents
| where Timestamp > ago(14d)
| where InitiatingProcessCommandLine has_any (['MFA fatigue', 'password spray', 'Entra', 'credential',
'token']) or RemoteUrl has_any (['MFA fatigue', 'password spray', 'Entra', 'credential', 'token'])
| summarize Connections=count(), FirstSeen=min(Timestamp), LastSeen=max(Timestamp) by DeviceName,
InitiatingProcessFileName, RemoteUrl, RemoteIP, RemotePort
| order by Connections desc

```

10. Risk Assessment

Dimension	Assessment	Rationale
-----------	------------	-----------

Likelihood	Medium to High	Topic is current and maps to common adversary paths.
Impact	Medium to High	Credential theft, supply-chain compromise, service disruption, or data theft could affect critical workflows.
Detection Confidence	Medium	Behavioral analytics are useful but require local baselining and source-specific IOC enrichment.

11. Recommended Actions

Priority	Owner	Action
Critical	SOC	Run behavior hunts and review any privileged identity anomalies from the last 14 days.
High	IAM	Enforce phishing-resistant MFA for privileged users and review risky sign-ins.
High	Platform owners	Patch or isolate exposed systems and validate third-party access paths.
Medium	Threat intel	Pull vendor-specific IOCs from cited sources and enrich SIEM watchlists.
