8. MITRE ATT&CK Mapping
9. Detection Engineering
10. Threat Hunting
11. Triage and Incident Response
12. Validation and Emulation
13. Recommendations
14. References and Refresh Notes

1. Executive Summary

This sample is a three-page PDF using Frontier Airlines themed travel-support language and the repeated phone number +1-877-622-0707. Static analysis did not identify PDF exploit features such as JavaScript, embedded files, launch actions, XFA, AcroForm content, URI actions, encryption, object streams, or rich media. The only action-like feature observed was an `/OpenAction` that opens page 1 at a view coordinate, not a code-execution or external-launch primitive.

The strongest assessment is that this is a scam-support or SEO-poisoning document rather than a conventional malware payload. The sample should still be handled as suspicious because it was distributed in a password-protected archive named with an exact SHA-256, uses repetitive brand-impersonation content, and promotes a phone number that differs from Frontier Airlines' official customer-service number as of the source check performed on 2026-06-03.

Confirmed facts:

- The extracted file is a PDF 1.7 document, 41,040 bytes, three pages, unencrypted.
- The PDF was produced by LibreOffice 24.8.0.3 with creator **Writer**.
- The visible text repeatedly references +1-(877)-622-0707 and +1 (877) 622 0707.
- `pdfinfo` reported no JavaScript, no form, no suspect flag, and no embedded files.
- `pdfdetach` found zero embedded files.
- Raw PDF token checks found `/JS`, `/JavaScript`, `/AA`, `/Launch`, `/EmbeddedFile`, `/RichMedia`, `/AcroForm`, `/XFA`, `/URI`, `/SubmitForm`, `/GoToE`, `/ObjStm`, `/Encrypt`, `/Names`, `/Action`, and `/FileSpec` absent, except for one `/OpenAction`.
- The `/OpenAction` value is `[1 0 R /XYZ null null 0]`, which points to page 1 view positioning.

Analyst assessment:

- The likely objective is social engineering: drive users to call a non-official support number under a Frontier Airlines pretext.
- The sample does not currently show technical exploit behavior; risk comes from fraud enablement, brand impersonation, and potential downstream phone-based compromise.
- The sample is best classified as suspicious scamware/phishing content, not confirmed exploit malware.

2. Sample Metadata

Field	Value
Source archive	/home/lost0x01/Downloads/25202134301.zip
Archive password	infected
Archive SHA256	7fa5c5dd7a02a6f69f9fa317d82ec781964dd500c306e0f9a51a8b5910
Extracted filename	66664037202d721a51292fb569b256114f552aac1d84946521433ccec3
Extracted SHA256	66664037202d721a51292fb569b256114f552aac1d84946521433ccec3
Extracted SHA1	44fa338bf35b6d482bf26c87ddb75987dd752a9b
Extracted MD5	b68772b9e71c6db8835cb0f60c4c4021
File type	PDF document, version 1.7
File size	41,040 bytes
Page count	3
Creation date	2026-04-25 17:57:02 EDT
Creator	Writer
Producer	LibreOffice 24.8.0.3 (X86_64) / LibreOffice Community
Encryption	None
Embedded files	None observed
JavaScript	None observed
Form/XFA	None observed
Primary theme	Frontier Airlines seat-upgrade/support content
Promoted phone indicator	+1-877-622-0707

3. Source Review and Confidence

Claim	Source	Source Date	Confidence	Notes
The sample is a PDF 1.7 file with three pages and no JavaScript reported by PDF metadata tooling.	Local <code>file</code> and <code>pdftinfo</code> output	2026-06-03	High	Direct static evidence from the sample.
The PDF contains zero embedded files.	Local <code>pdfdetach -list</code> output	2026-06-03	High	Direct static evidence from the sample.
The only action-like token is <code>/OpenAction [1 0 R /XYZ null null 0]</code> .	Local <code>grep</code> and <code>mutool clean -d</code> output	2026-06-03	High	Indicates automatic view positioning, not JavaScript or launch.
Frontier Airlines' official contact page lists 602-333-5925 and chat/WhatsApp contact paths, not 877-622-0707.	Frontier Airlines FAQ contact page	2026-04-09 page modification; accessed 2026-06-03	High	Official brand source.
Similar 877-622-0707 Frontier-themed PDF spam is indexed on public web properties.	Public search results including <code>viainfo.net</code> PDF snippets	Accessed 2026-06-03	Medium	Strong pattern match, but third-party hosting can change.
FBI describes tech/customer support scams as impersonating legitimate organizations and pushing victims to call support numbers or visit ads/websites.	FBI Tech Support Scams guidance	Accessed 2026-06-03	High	Official law-enforcement source.
FTC warns that scammers can use search results, fake popups, and fake support numbers; users should contact companies through known-good official channels.	FTC consumer guidance	Accessed 2026-06-03	High	Official consumer-protection source.

Claim	Source	Source Date	Confidence	Notes
IC3's 2025 report states Tech/Customer Support and Government Impersonation call-center fraud exceeded 80,000 complaints and \$2.9B in losses in 2025.	FBI IC3 2025 Annual Report	2026 publication; accessed 2026-06-03	High	Official annual report.

Confidence statement: High confidence that the file is a scam-support PDF. Medium confidence that it is part of a broader SEO-poisoning or support-scam content cluster. Low confidence for malware-family attribution because no executable payload, C2, or exploit chain was recovered.

4. Payload Variants and Delivery

Observed delivery:

- The sample arrived in a password-protected ZIP using the common malware-exchange password **infected**.
- The extracted filename is the file's SHA-256 hash, a convention often used for sample handling rather than end-user delivery.
- The document itself appears benign in rendering behavior but malicious or abusive in social context.

Likely external delivery patterns:

- Search-indexed PDFs and web posts that answer common airline-service questions while repeatedly inserting a phone number.
- SEO poisoning around travel-support queries such as seat upgrades, missed flights, refunds, name changes, and customer service.
- Potential email, forum, or file-upload distribution where the PDF is used as a lure rather than as an exploit carrier.

No confirmed payload variants were recovered from this archive. Public search results show similar Frontier-themed documents using the same phone number, but those documents were not downloaded or analyzed as separate samples during this run.

5. Infection Chain Analysis

No technical infection chain was observed. The likely victim flow is social rather than exploit-driven:

1. User searches for Frontier Airlines support or receives a linked PDF.
2. User opens a document that appears to provide travel guidance.
3. The document repeatedly directs the user to +1-877-622-0707.
4. If the user calls, a fraud operator may solicit PII, payment details, reservation information, remote-access installation, or account credentials.
5. Downstream impact may include payment fraud, identity theft, account takeover, or installation of remote-access tools if the caller is instructed to install software.

Technical chain not observed:

- No PDF JavaScript execution.
- No embedded executable or secondary document.
- No auto-launched URL.
- No exploit primitive confirmed.
- No persistence, process injection, C2, credential theft, or lateral movement artifact in the PDF itself.

6. Technical Analysis

6.1 PDF Structure

Feature	Result	Interpretation
PDF version	1.7	Normal modern PDF version.
Pages	3	Small lure document.
Objects	42 object declarations observed	Consistent with a short document containing text and embedded fonts.
Streams	11 streams observed	Mostly compressed page/font streams.
Zlib/Flate streams	Present	Expected for compressed content and fonts.
Embedded fonts	Cambria, MS-Gothic, LiberationSerif, OpenSymbol	Expected from LibreOffice-generated PDF.
Metadata stream	None	Not inherently suspicious.
Tagged PDF	Yes	Consistent with office-generated output.
Encrypted	No	Allows static inspection.
Optimized	No	Not inherently suspicious.

6.2 Suspicious PDF Feature Checks

Token / Feature	Count	Risk Meaning
/JS	0	No JavaScript token observed.
/JavaScript	0	No JavaScript action observed.
/AA	0	No additional page/action trigger observed.
/OpenAction	1	Present, but resolves to page-view positioning.
/Launch	0	No file launch action observed.
/EmbeddedFile	0	No embedded payload observed.
/RichMedia	0	No rich-media exploit surface observed.
/AcroForm	0	No form object observed.
/XFA	0	No XFA form observed.
/URI	0	No clickable URI action token observed.
/SubmitForm	0	No form submission behavior observed.
/GoToE	0	No embedded-document navigation observed.
/ObjStm	0	No compressed object stream hiding observed.
/Encrypt	0	No encryption observed.
/FileSpec	0	No file specification object observed.

6.3 Content Analysis

The extracted text is repetitive travel-support copy. It is framed around whether Frontier Airlines seat upgrades are worth it and repeatedly inserts the same phone number. The writing style resembles low-quality SEO filler: high repetition, brand name stuffing, support-number stuffing, and broad travel advice.

Representative content themes:

- Frontier seat upgrades and Stretch seating.
- UpFront Plus seating.
- Carry-on and bundle pricing.

- Calls to verify rates or book by phone.
- Heavy repetition of +1-(877)-622-0707 and +1 (877) 622 0707.

Notable mismatch:

- Frontier Airlines' official contact page listed 602-333-5925 for Customer Service during enrichment.
- The sample promotes 877-622-0707, which should be treated as untrusted in this context.

6.4 Hidden Payload Review

Carving and structure review did not identify a second-stage payload. **binwalk** found the expected PDF header and zlib-compressed streams. **foremost** did not recover an executable, archive, or secondary payload from the sample. The lack of `/EmbeddedFile`, `/FileSpec`, JavaScript, and URI tokens further reduces the likelihood of hidden active content.

6.5 Family / Type Assessment

Dimension	Assessment
Malware family	Unattributed
Malware type	Scam-support / phishing lure PDF
Platform	Cross-platform document lure; social-engineering risk applies to any PDF viewer user
Runtime	PDF viewer only; no executable runtime observed
Exploit status	Not confirmed
C2	None observed
Persistence	None observed
Primary risk	Phone-based fraud and potential downstream remote-access/credential theft

7. Indicators of Compromise

7.1 Indicator Summary

Indicator Class	Count	Confidence	Recommended Use
SHA256 hashes	2	High	Exact-match sweep for archive and extracted PDF.
SHA1 hashes	1	High	Secondary exact-match sweep.
MD5 hashes	1	High	Legacy exact-match sweep only.
Phone numbers	1	Medium	Hunt for brand-impersonation content and user-contact exposure.
Domains	1	Low	Contextual enrichment only; do not block solely from this report.
URLs	3	Medium	Source-review context and web-content hunting.
Host indicators	0	Low	No endpoint behavior observed.

7.2 Source Notes

Source	Contribution
Local static analysis	Confirmed file type, hashes, metadata, PDF actions, text, and absence of common active-content features.
Frontier Airlines official FAQ	Established that the sample's promoted number does not match the official customer-service number observed during enrichment.
FBI / FTC / IC3	Established broader support-scam context and downstream victim risks.
Public search results	Showed multiple public pages/PDFs using the same number in Frontier-themed support content.

7.3 File Hashes

Type	Indicator	Confidence	Handling
SHA256	66664037202d721a51292fb5	High	Sweep EDR, mail gateways, web gateways, file shares, and document repositories.
SHA256	7fa5c5dd7a02a6f69f9fa317	High	Sweep for the submitted ZIP archive.
SHA1	44fa338bf35b6d482bf26c87	High	Use as secondary exact-match indicator.
MD5	b68772b9e71c6db8835cb0f6	High	Use only for legacy tooling that lacks SHA-256 support.

7.4 Network Indicators

Type	Indicator	Confidence	Handling
Phone	+1-877-622-0707	Medium	Do not call. Hunt for documents, emails, tickets, chat logs, proxy text extraction, and browser history referencing this number.
Domain	viainfo.net	Low	Public search results showed PDFs with similar number stuffing. Treat as enrichment context; block only after local policy review and additional confirmation.

7.5 URL / Config Indicators

Type	Indicator	Confidence	Handling
URL	https://faq.flyfrontier.com	High	Official verification reference, not malicious.
URL	https://www.viainfo.net/	Medium	Similar public PDF content using the same number; treat as suspicious content reference.
URL	https://www.viainfo.net/	Medium	Similar public PDF content using the same number; treat as suspicious content reference.

7.6 Host Indicators

No host persistence indicators were recovered from this PDF. Recommended host hunts should focus on exposure to the file or phone number rather than malware execution artifacts.

7.7 IOC Usage Guidance

The file hashes are strong exact-match indicators. The phone number is a social-engineering indicator and should be used with context. A legitimate phone-number owner may exist outside this scam campaign, so blocking or escalation decisions should be based on the number appearing in Frontier-themed support lures, unsolicited documents, email bodies, search-result PDFs, or user reports.

8. MITRE ATT&CK Mapping

Technique	Name	Applicability	Evidence
T1566	Phishing	Medium	Document lure promotes a support contact under brand pretext. Delivery vector was not confirmed.
T1204.002	User Execution: Malicious File	Low	User opening the PDF is required for lure exposure, but no code execution was observed.
T1583.001	Acquire Infrastructure: Domains	Low	Public web hosting of similar lure PDFs suggests infrastructure use, but ownership/control was not confirmed.
T1584.001	Compromise Infrastructure: Domains	Low	Possible abuse of upload-capable public sites, but not confirmed for this sample.
T1598	Phishing for Information	Medium	Likely goal is to obtain sensitive details by phone after lure contact.
T1656	Impersonation	High	PDF impersonates or references Frontier Airlines support while promoting a non-official support number.

9. Detection Engineering

9.1 YARA - Frontier Support Scam PDF Lure

```
rule PDF_Frontier_Support_Scam_8776220707
{
  meta:
    description = "Detects a Frontier-themed scam-support PDF promoting 877-622-0707"
    author = "Lost Boys Cyber"
    date = "2026-06-03"
    tlp = "TLP:CLEAR"
    sha256 = "66664037202d721a51292fb569b256114f552aac1d84946521433ccec3cf5008"
  strings:
    $pdf = "%PDF-1.7" ascii
    $brand = "Frontier" ascii wide nocase
    $topic1 = "Stretch seating" ascii wide nocase
    $topic2 = "UpFront Plus" ascii wide nocase
    $phone1 = "+1-(877)-622-0707" ascii wide
    $phone2 = "+1 (877) 622 0707" ascii wide
  condition:
    uint32(0) == 0x46445025 and
    $pdf and
    $brand and
    ($topic1 or $topic2) and
    2 of ($phone*)
}
```

Validation notes:

- Test against known-good Frontier PDFs and legitimate travel documents before deployment.
- This rule is content-specific and should be used for triage, not broad malware blocking.
- If deployed at mail or document-ingestion layers, pair with brand-impersonation and sender/source context.

9.2 Sigma - Suspicious PDF With Known Scam Phone Number Written To Endpoint

```
title: Suspicious PDF Containing Frontier Support Scam Number Written To Disk
id: 5f35dd4b-37b7-4c6d-9f9b-252021343010
status: experimental
description: Detects creation of a PDF-like file with a known Frontier-themed scam support number in environments
  ↳ where file-content telemetry is available.

  OR "+1-(877)-622-0707"
  OR "+1 (877) 622 0707"
)
| table _time host user file_name file_path sha256 process_name process_command_line
```

9.5 Mail / Web Gateway Logic

Detection hypothesis:

- If a support-scam lure is delivered by email or web download, mail/web telemetry will show a PDF containing repeated brand terms and a non-official support number.

Recommended fields:

- Attachment SHA-256.
- Extracted attachment text.
- Sender domain and authentication status.
- URL source and referrer.
- Browser download URL.
- User who opened or downloaded the file.

Tuning:

- Exclude internal security research paths and known analysis mailboxes.
- Avoid blocking all documents containing the phone number until false positives are reviewed.
- Raise severity when the number appears with **Frontier**, **seat upgrade**, **refund**, **missed flight**, **name change**, or **customer service**.

10. Threat Hunting

Hunt 1 - Find Exposure To The Exact PDF

Hypothesis: If users received or downloaded this sample, endpoint or gateway telemetry will contain the exact SHA-256.

Data sources:

- EDR file events.
- Email attachment logs.
- Web proxy download logs.
- DLP or CASB document stores.

Query pivot:

- 66664037202d721a51292fb569b256114f552aac1d84946521433ccec3cf5008

Triage:

- Identify first-seen time, user, delivery channel, and whether the file was opened.
- If opened, review browser history and call-reporting channels for contact with the promoted number.

Hunt 2 - Find Scam Phone Number Mentions

Hypothesis: If the same campaign reached the environment, the phone number may appear in email bodies, attachments, chat messages, tickets, proxy text extraction, or browser history.

Terms:

- 877-622-0707
- +1-(877)-622-0707
- +1 (877) 622 0707
- 8776220707

Triage:

- Group by source channel.
- Review nearby words for **Frontier**, **Airlines**, **seat**, **upgrade**, **refund**, **missed flight**, and **name change**.
- Prioritize users who interacted with the document or reported travel-support issues.

Hunt 3 - Identify Brand-Impersonation SEO PDFs

Hypothesis: A broader cluster uses uploaded PDFs and web posts to insert fake customer-service numbers into search results.

Search pattern:

- Documents with a high ratio of repeated phone-number strings.
- Airline or travel brand names plus support language.
- PDFs hosted on unrelated third-party domains.

Triage:

- Confirm the official support channel through the brand's own domain.
- Do not rely on search snippets alone for legitimacy.
- Preserve original URLs and timestamps for takedown and case records.

11. Triage and Incident Response

Immediate actions:

1. Quarantine the ZIP and extracted PDF from normal user-accessible locations.
2. Sweep endpoint, email, and proxy telemetry for the file hashes and phone-number variants.
3. Identify any users who opened the file or called the number.
4. If contact occurred, interview the user for payment, credential, MFA, remote-access, and PII exposure.
5. Reset credentials and revoke sessions if account details or MFA codes were shared.
6. Review endpoint for remote-access tools if the caller instructed the user to install software.
7. Report confirmed fraud attempts to IC3 and FTC channels where appropriate.

Containment guidance:

- Block or warn on the exact file hash at EDR and mail gateways.
- Add the phone number to brand-impersonation content monitoring.
- Consider web-filter review for public URLs hosting similar PDFs, but avoid overbroad domain blocking without local business-impact review.

Evidence handling:

- Keep the original password-protected archive and extracted PDF in an analysis-only evidence folder.

- Preserve hashes, timestamps, original path, and extraction commands.
- Do not call the promoted number as part of routine triage.

12. Validation and Emulation

Validated locally:

- Archive listed and extracted with password **infected**.
- SHA-256, SHA-1, and MD5 recorded.
- File identified as PDF 1.7.
- PDF metadata reviewed with **pdftinfo**.
- Embedded files checked with **pdfdetach -list**.
- Signature status checked with **pdfsig**.
- Action and active-content tokens searched in raw and decoded PDF views.
- Object graph reviewed with **mutool show**.
- Streams decoded with **mutool clean -d**.
- Basic carving checked with **binwalk** and **foremost**.
- Text extracted with **pdftotext**.
- Public enrichment performed for the file hash, phone number, Frontier official contact page, FBI, FTC, and IC3 context.

Not performed:

- No dynamic detonation was performed because the sample showed no executable payload and no active PDF exploit features.
- No phone-number interaction was performed.
- No public sandbox submission was made, to avoid sharing potentially sensitive local handling metadata.

Suggested emulation:

- Send a harmless internally generated PDF containing the scam phone number to a test mailbox and validate mail-content detection.
- Stage a test file with the same SHA only in a controlled lab if EDR hash-block validation is required.
- Simulate a user-report workflow for fake customer-service calls and validate helpdesk escalation.

13. Recommendations

Priority	Owner	Timeline	Action
High	SOC	24 hours	Sweep for the extracted PDF SHA-256 and archive SHA-256.
High	SOC / Helpdesk	24 hours	Search for 877-622-0707 across email, chat, proxy, and endpoint telemetry where available.
High	IR	24 hours	If any user called the number, assess payment, PII, credential, MFA, and remote-access exposure.
Medium	Detection Engineering	3 business days	Deploy tuned content detection for Frontier-themed PDFs using this phone number.
Medium	Email Security	3 business days	Add attachment-text rules for repeated phone-number stuffing in travel-support PDFs.

Priority	Owner	Timeline	Action
Medium	Security Awareness	1 week	Publish a short advisory: verify airline support channels only through official domains.
Medium	Threat Intel	1 week	Track public PDFs and posts using this number; submit takedown requests where appropriate.
Low	IT / Browser Security	2 weeks	Review whether browser/search reputation controls flag SEO-spam PDFs and unrelated upload domains.

14. References and Refresh Notes

- FBI IC3, “2025 IC3 Annual Report”, accessed 2026-06-03: https://www.ic3.gov/AnnualReport/Reports/2025_IC3Report
- Public search result showing similar Frontier PDF with +1-877-622-0707, accessed 2026-06-03: <https://www.viainfo.net/>
- Public search result showing similar Frontier PDF with +1-877-622-0707, accessed 2026-06-03: <https://www.viainfo.net/>

Refresh notes:

- Re-check Frontier’s official contact page before using phone-number mismatch language in future reports, because support channels can change.
- Re-check public indexed PDFs before takedown or blocking decisions, because third-party uploaded content can disappear or change.
- If a future sample includes URI actions, JavaScript, embedded files, or secondary payloads, raise severity and perform dynamic sandboxing in a controlled environment.
